The same work code has been geo-tagged 10 times by the MSE. Now, there are 10 units of work in that work code, that's why MSE has geo-tagged it 10 times. The work registration has been done wrongly in MIS and which is creating problem now.

Any work taken up on community land must be registered as 1 work code to 1 unit of the work at the field.

Under 1 work code, registration of multiple units of project is applicable to works taken up on individual land only. For e.g. IHHL, 18 days compost, vermi compost, piggery shed, poultry shed etc.

Letter on correctly registration of work has been issued in month of Dec 2017 and Blocks must follow the instruction as said in the letter. Copy of the letter is attached along.

Presently, our system is not tagged under the code “Accepted” with respect to the asset and photograph. It will be automatically tagged to the server.

Presently, out of all units geo-tagged under the said work code "Accept" the best one with respect to GPS accuracy and photograph rest will be automatically removed by the server.
